16:30

Full Landing Page Build With Frames & ACSS.mp4

Our frame looks already similar to the original. But we'll style it later. For now we just concentrate on structure.

1 Actionable insights

Optimize your products, improve customer satisfaction and stay ahead of the competition with our product data analytics.

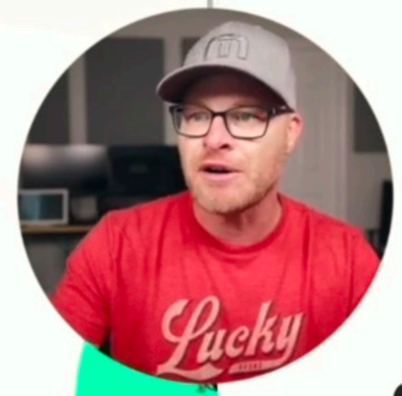

2 Data-driven decisions

Make data-driven decisions with our product data analytics. Our AI-generated reports help you unlock insights hidden in your product data.

3 Always affordable

Always affordable pricing that scales with your business. Get top-quality product data analytics services without hidden costs or unexpected fees.

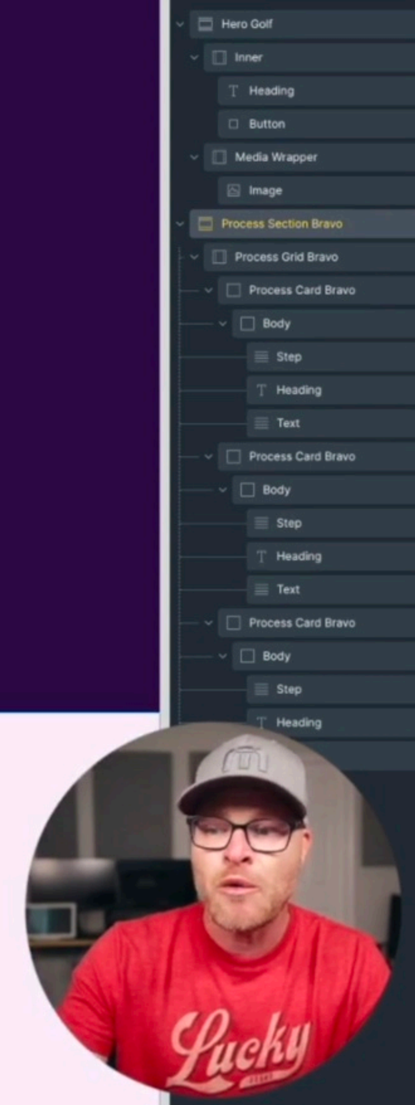

1440 × 960

16:40

Full Landing Page Build With Frames & ACSS.mp4

We set the ‘base-ultra-light’ at the Frames class because all of the other sections of this kind shall have the same background color.

Full Landing Page Build With Frames & ACSS.mp4

Our color does not match yet but we used the correct name and can adjust it later in the styling part.

1 2 3

Now we look for a frame which can be used for this section. It seems that Testimonial could be used. Also we can look in the Features or in Action Cards.

The most important here: Can we find a Frame where media is overlapped by content?

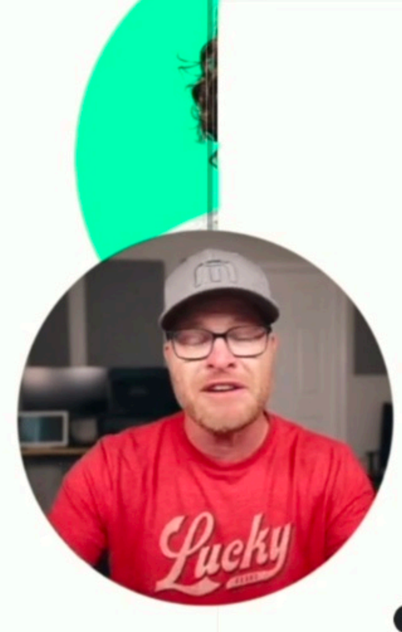

Be the first to test

Hi, I'm Louis Graham, the founder of the company. Book a demo call with me to become a beta tester for our app and kickstart your company. Apply for access below and I'll be in touch to schedule a call.

Custom Shape Dividers

We created this free tool to make it easier for designers and developers to export a beautiful SVG shape divider for their latest project. We hope you enjoy this tool.

Our Shape Dividers are premade SVG shapes that are not dynamic to the settings you use on the toolbar. Every Shape exported will come out as per it's original design and is manipulated via the code you export with it and implement into your web build.

Shape Select your style — Waves

Colour Pick any colour — #FFFFFF

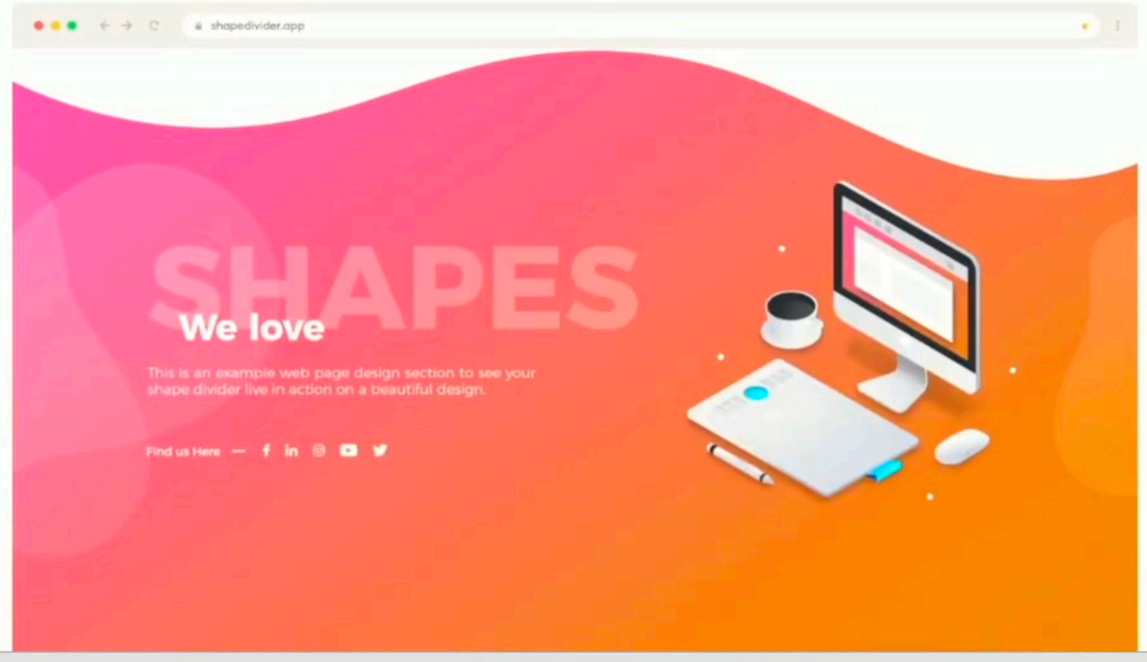

Flip Flip Horizontally — No

text-decoration-thickness

The `text-decoration-thickness` CSS property sets the stroke thickness of the decoration line that is used on text in an element, such as a line-through, underline, or overline.

Try it

CSS Demo: text-decoration-thickness

RESET

```
text-decoration-line: underline;
text-decoration-thickness: 3px;
```

```
text-decoration-line: line-throug
text-decoration-thickness: 0.4rem
```

```
text-decoration-line: underline o
text-decoration-thickness: from-f
font-size: 2rem;
```

Confusion kissed me on the cheek, and left a taste so bittersweet

Syntax

CSS

```
/* Single keyword */
text-decoration-thickness: auto;
text-decoration-thickness: from-font;

/* length */
text-decoration-thickness: 0.1em;
text-decoration-thickness: 3px;

/* percentage */
text-decoration-thickness: 10%;

/* Global values */
text-decoration-thickness: inherit;
text-decoration-thickness: initial;
text-decoration-thickness: revert;
text-decoration-thickness: revert-layer;
```

Custom CSS

```
root {
    position: relative;
}

root::before {
    content: '';
  display: flex;
  position: absolute;
  left: -170px;
  top: 35%;
```

Use "root" to target the element wrapper: root { background: blue }

CSS classes

Separated by space. Without class dot.

CSS ID

No spaces. No pound (#) sign.

ATTRIBUTES

workit

ahead of the competition with our product data analytics.

generated reports help you unlock insights hidden in your product data.

product data analytics services without hidden costs or fees.

By adding the class the element shows up. But we can not edit the CSS here because that would take place everywhere the class is used!

So we need locally scoped variables.

Be the first to test

Custom CSS

```css
root {
  position: relative;
  --left: -170px;
  --top: 35%;
  --width: 400px;
  --height: 400px;
}

root::before {
  content: '';
  display: flex;
  position: absolute;
  left: var(--left);
  top: var(--top);
  transform: translateY(-50%);
  width: var(--width);
  height: var(--height);
  background: url('/wp-content/uploads/bg-pattern-1.svg');
  background-size: cover;
  background-repeat: no-repeat;
}
```

Now we have included variables which we can change from case to case

Use "root" to target the element wrapper: root { background: blue }

CSS classes
