Top 10 Uses for Custom Post Types

(For Business Websites)

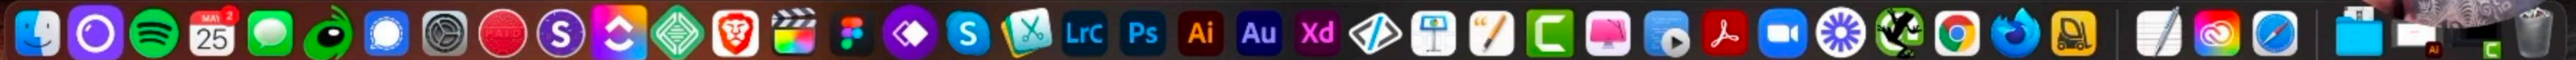

But Why?

- Makes data easier to query.
- Makes data categorizable (with one or multiple taxonomies).
- Makes it easier to attach custom fields.
- Keeps the dashboard cleaner & more organized.
- Makes it easier to create & query relationships (see the connections to the left).

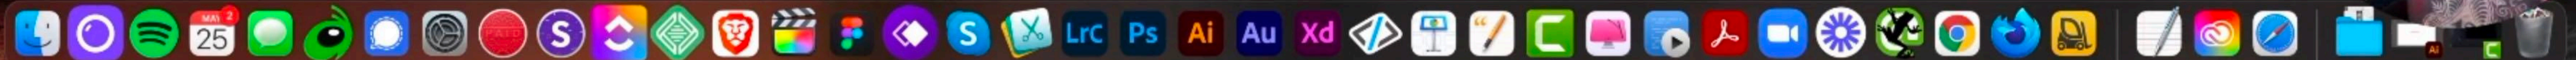

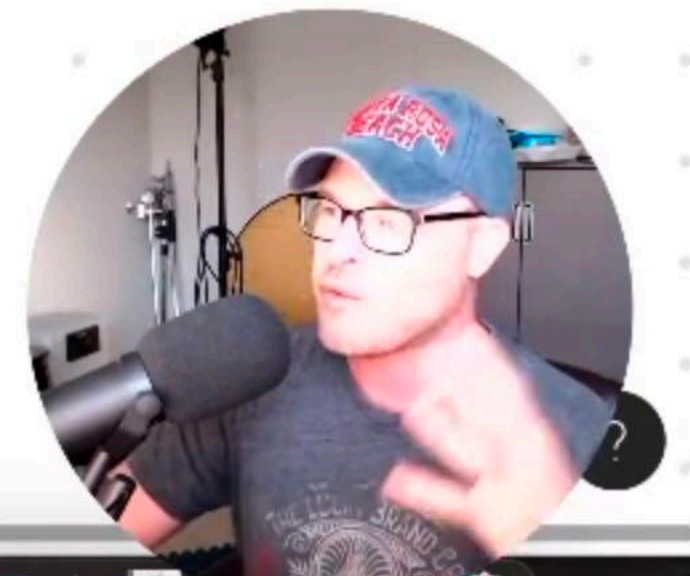

But How?

Oxygen

Gridbuilder

Collapse menu

(Custom Post Type UI default: true) Whether or not this post type is available for selection in navigation menus.

Delete with user

False

(CPTUI default: false) Whether to delete posts of this type when deleting a user.

Show in REST API

True

(Custom Post Type UI default: true) Whether or not to show this post type data in the WP REST API.

REST API base slug

Slug to use in REST API URLs.

REST API controller class

(default: WP_REST_Posts_Controller) Custom controller to use instead of WP_REST_Posts_Controller.

Has Archive

False

True

If left blank, the archive slug will default to the post type slug.

(default: false) Whether or not to create an archive page for this post type.

Slug to be used for archive URL.

Exclude From Search

False

(default: false) Whether or not to exclude posts with this post type from front end search results.

Capability Type

post

The post type to use for checking read, edit, and delete capabilities. A comma-separated second value can be used for plural version.

Hierarchical

False

(default: false) Whether or not the post type can have parent-child relationships. At least one published content item is needed in order to select a parent.

Rewrite

True

(default: true) Whether or not WordPress should use rewrites for this post type.

Custom Rewrite Slug

(default: post type slug)

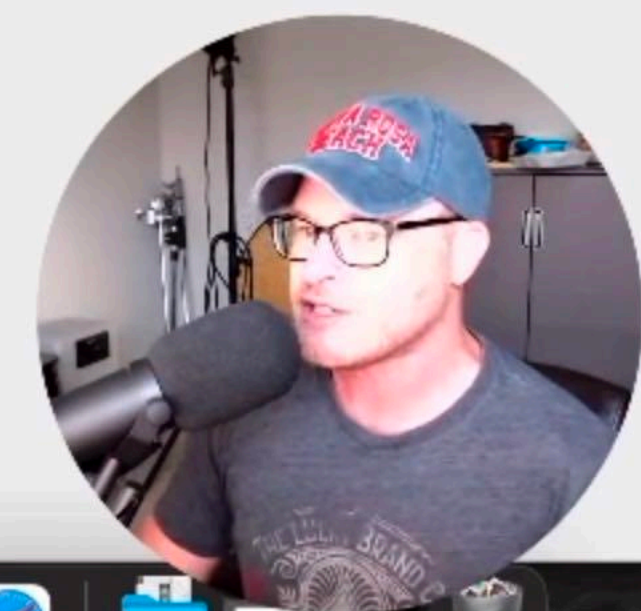

Custom post type slug to use instead of the default.

With Front

True

This means getting an automatic archive page. Therefore the default entry is set to 'false', because e.g. the services are usually customized with repeaters

Has Archive

False

If left blank, the archive slug will default to the post type slug.

(default: false) Whether or not the post type will have a post type archive URL.

Slug to be used for archive URL.

Exclude From Search

False

(default: false) Whether or not to exclude posts with this post type from front end search results.

Capability Type

post

The post type to use for checking read, edit, and delete capabilities. A comma-separated second value can be used for plural version.

Hierarchical

True

(default: false) Whether or not the post type can have parent-child relationships. At least one published content item is needed in order to select a parent.

Rewrite

True

(default: true) Whether or not WordPress should use rewrites for this post type.

Custom Rewrite Slug

(default: post type slug)

Custom post type slug to use instead of the default.

With Front

True

(default: true) Should the permalink structure be prepended with the front base. (example: if your permalink structure is /blog/, then your links will be: false->/news/, true->/blog/news/).

Query Var

True

(default: true) Sets the query_var key for this post type.

Custom Query Var Slug

(default: post type slug) Query var needs to be true to use.

Custom query var slug to use instead of the default.

Menu Position

See Available options in the "menu_position" section. Range of 5-100

The position in the menu order the post type should appear. show_in_menu must be true.

The most flexible way to do this is to always set this to 'True'

Add new Service Category

Name

The name is how it appears on your site.

Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

Parent Service Category

None

Assign a parent term to create a hierarchy. The term Jazz, for example, would be the parent of Bebop and Big Band.

Description

The description is not prominent by default; however, some themes may show it.

Gridbuilder - Color

Bidirectional relationships: Some team members work in different locations

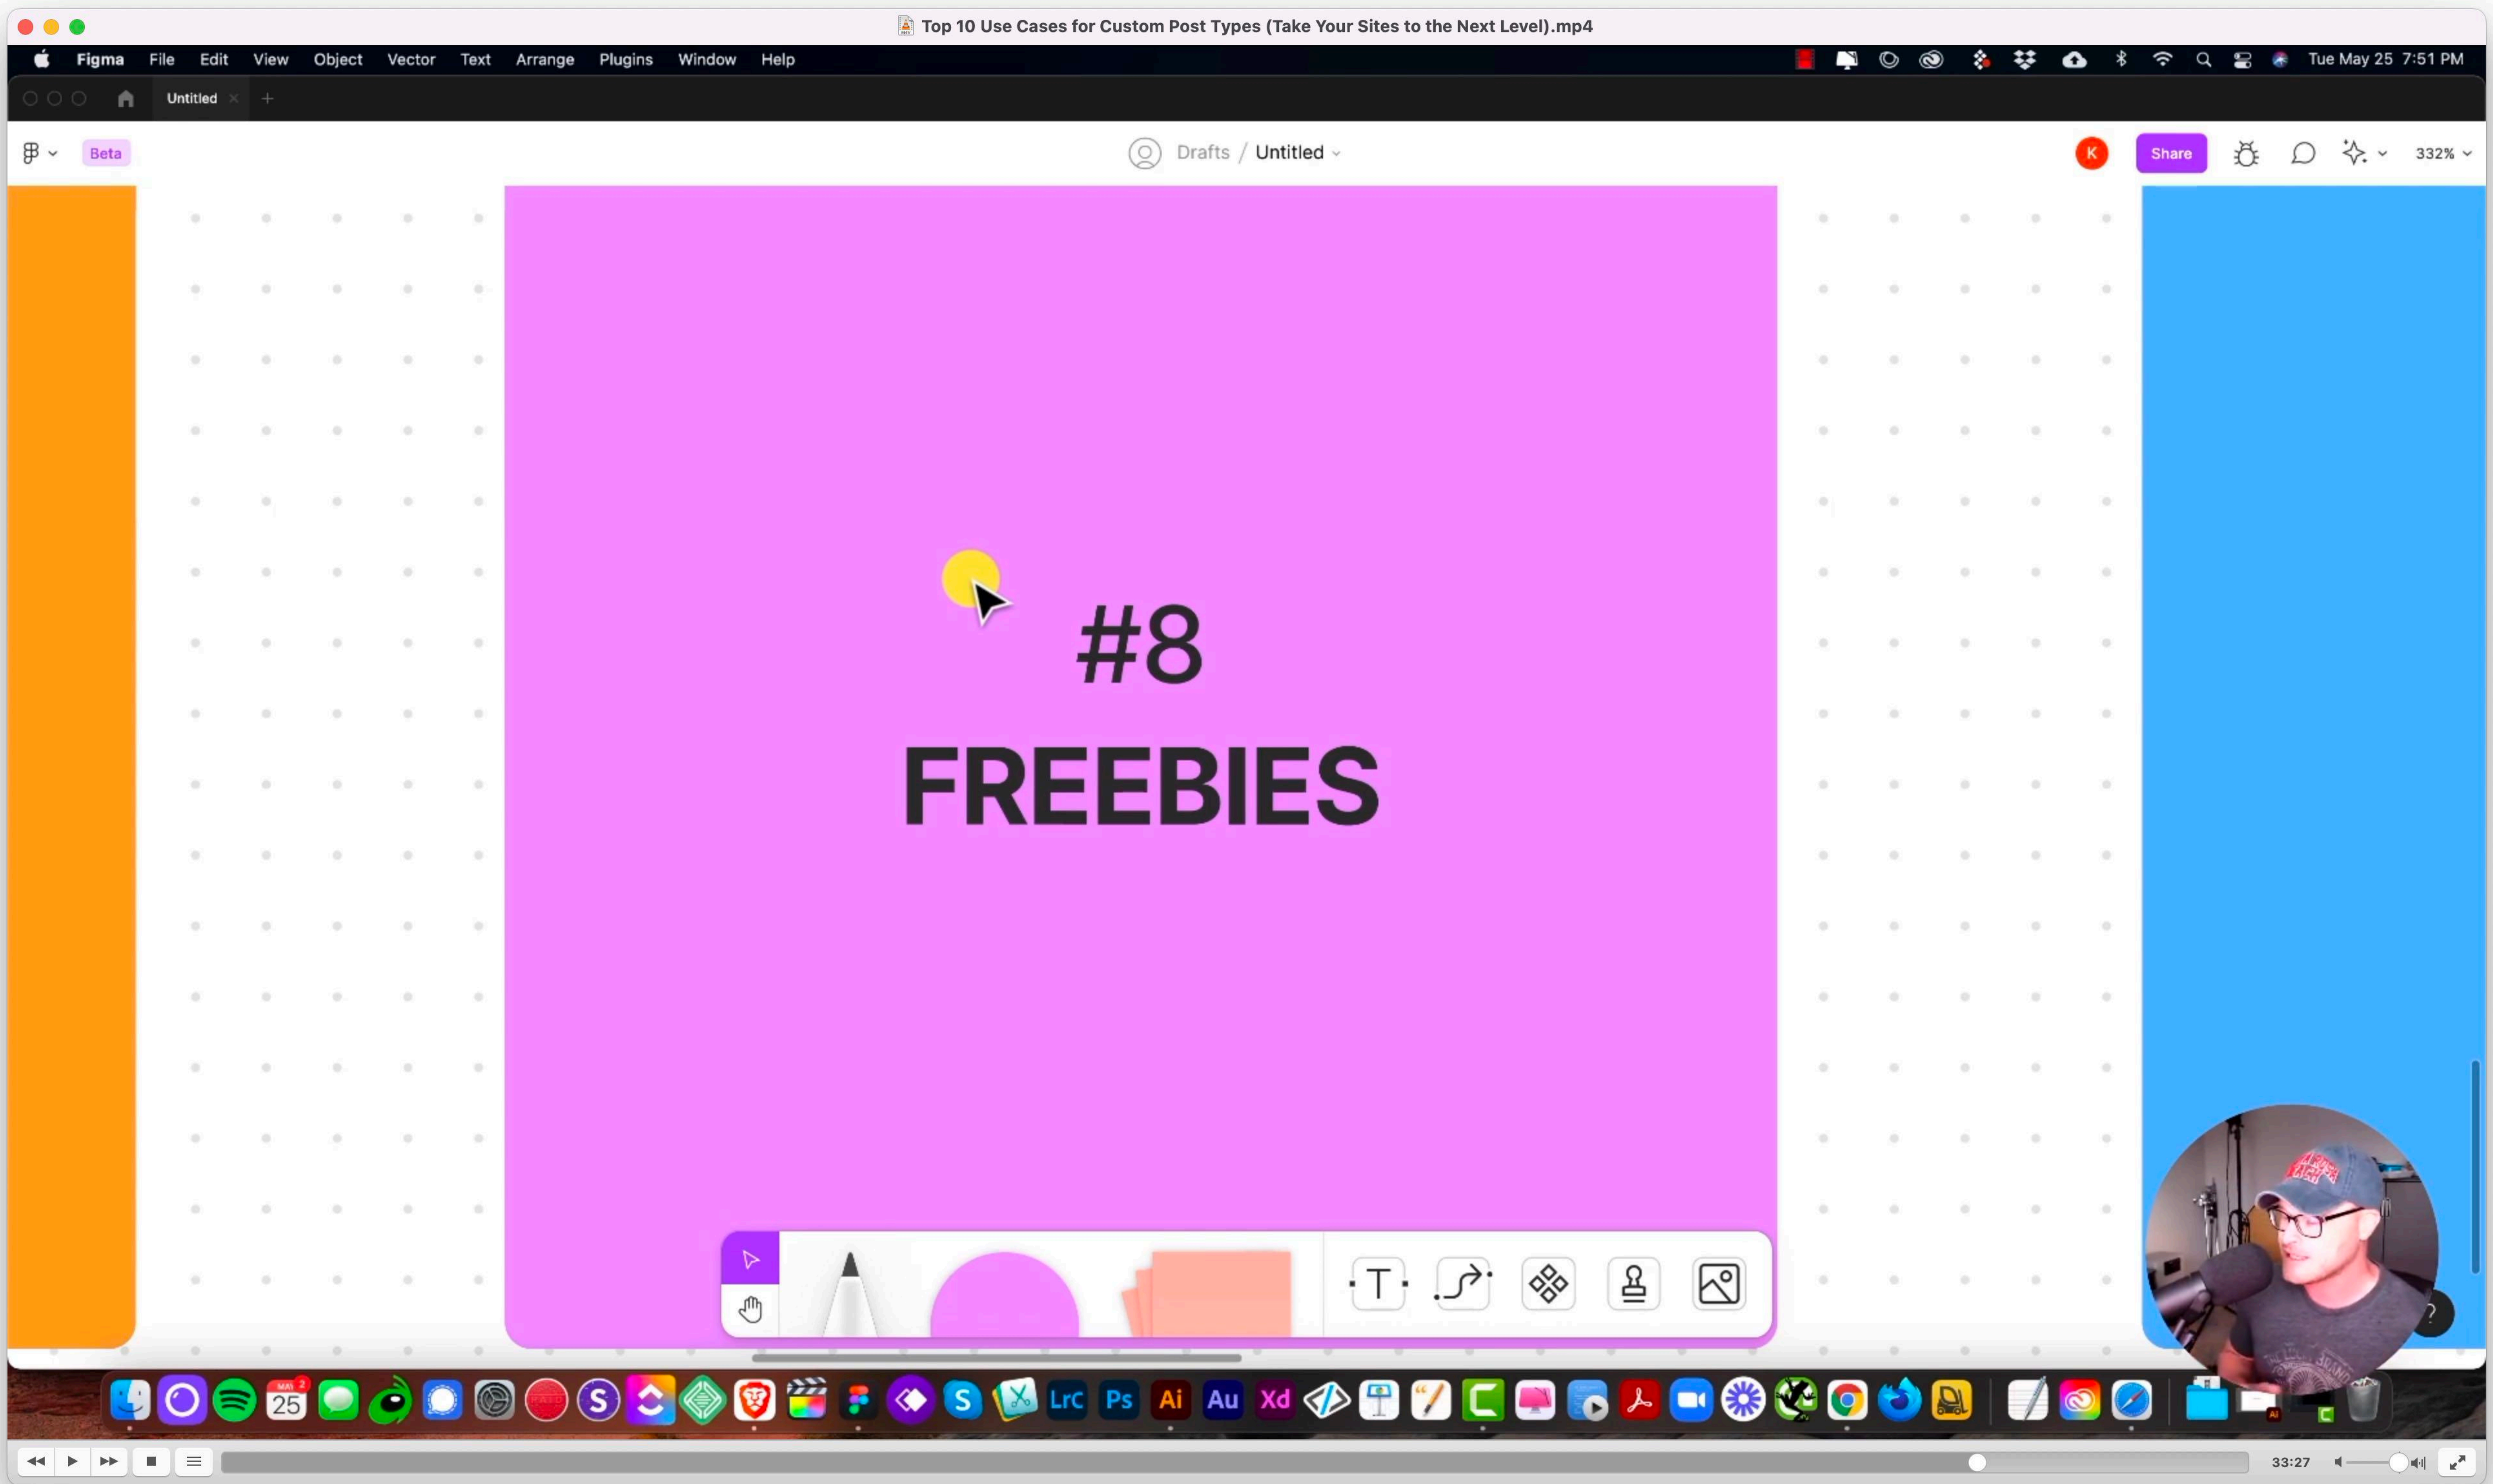

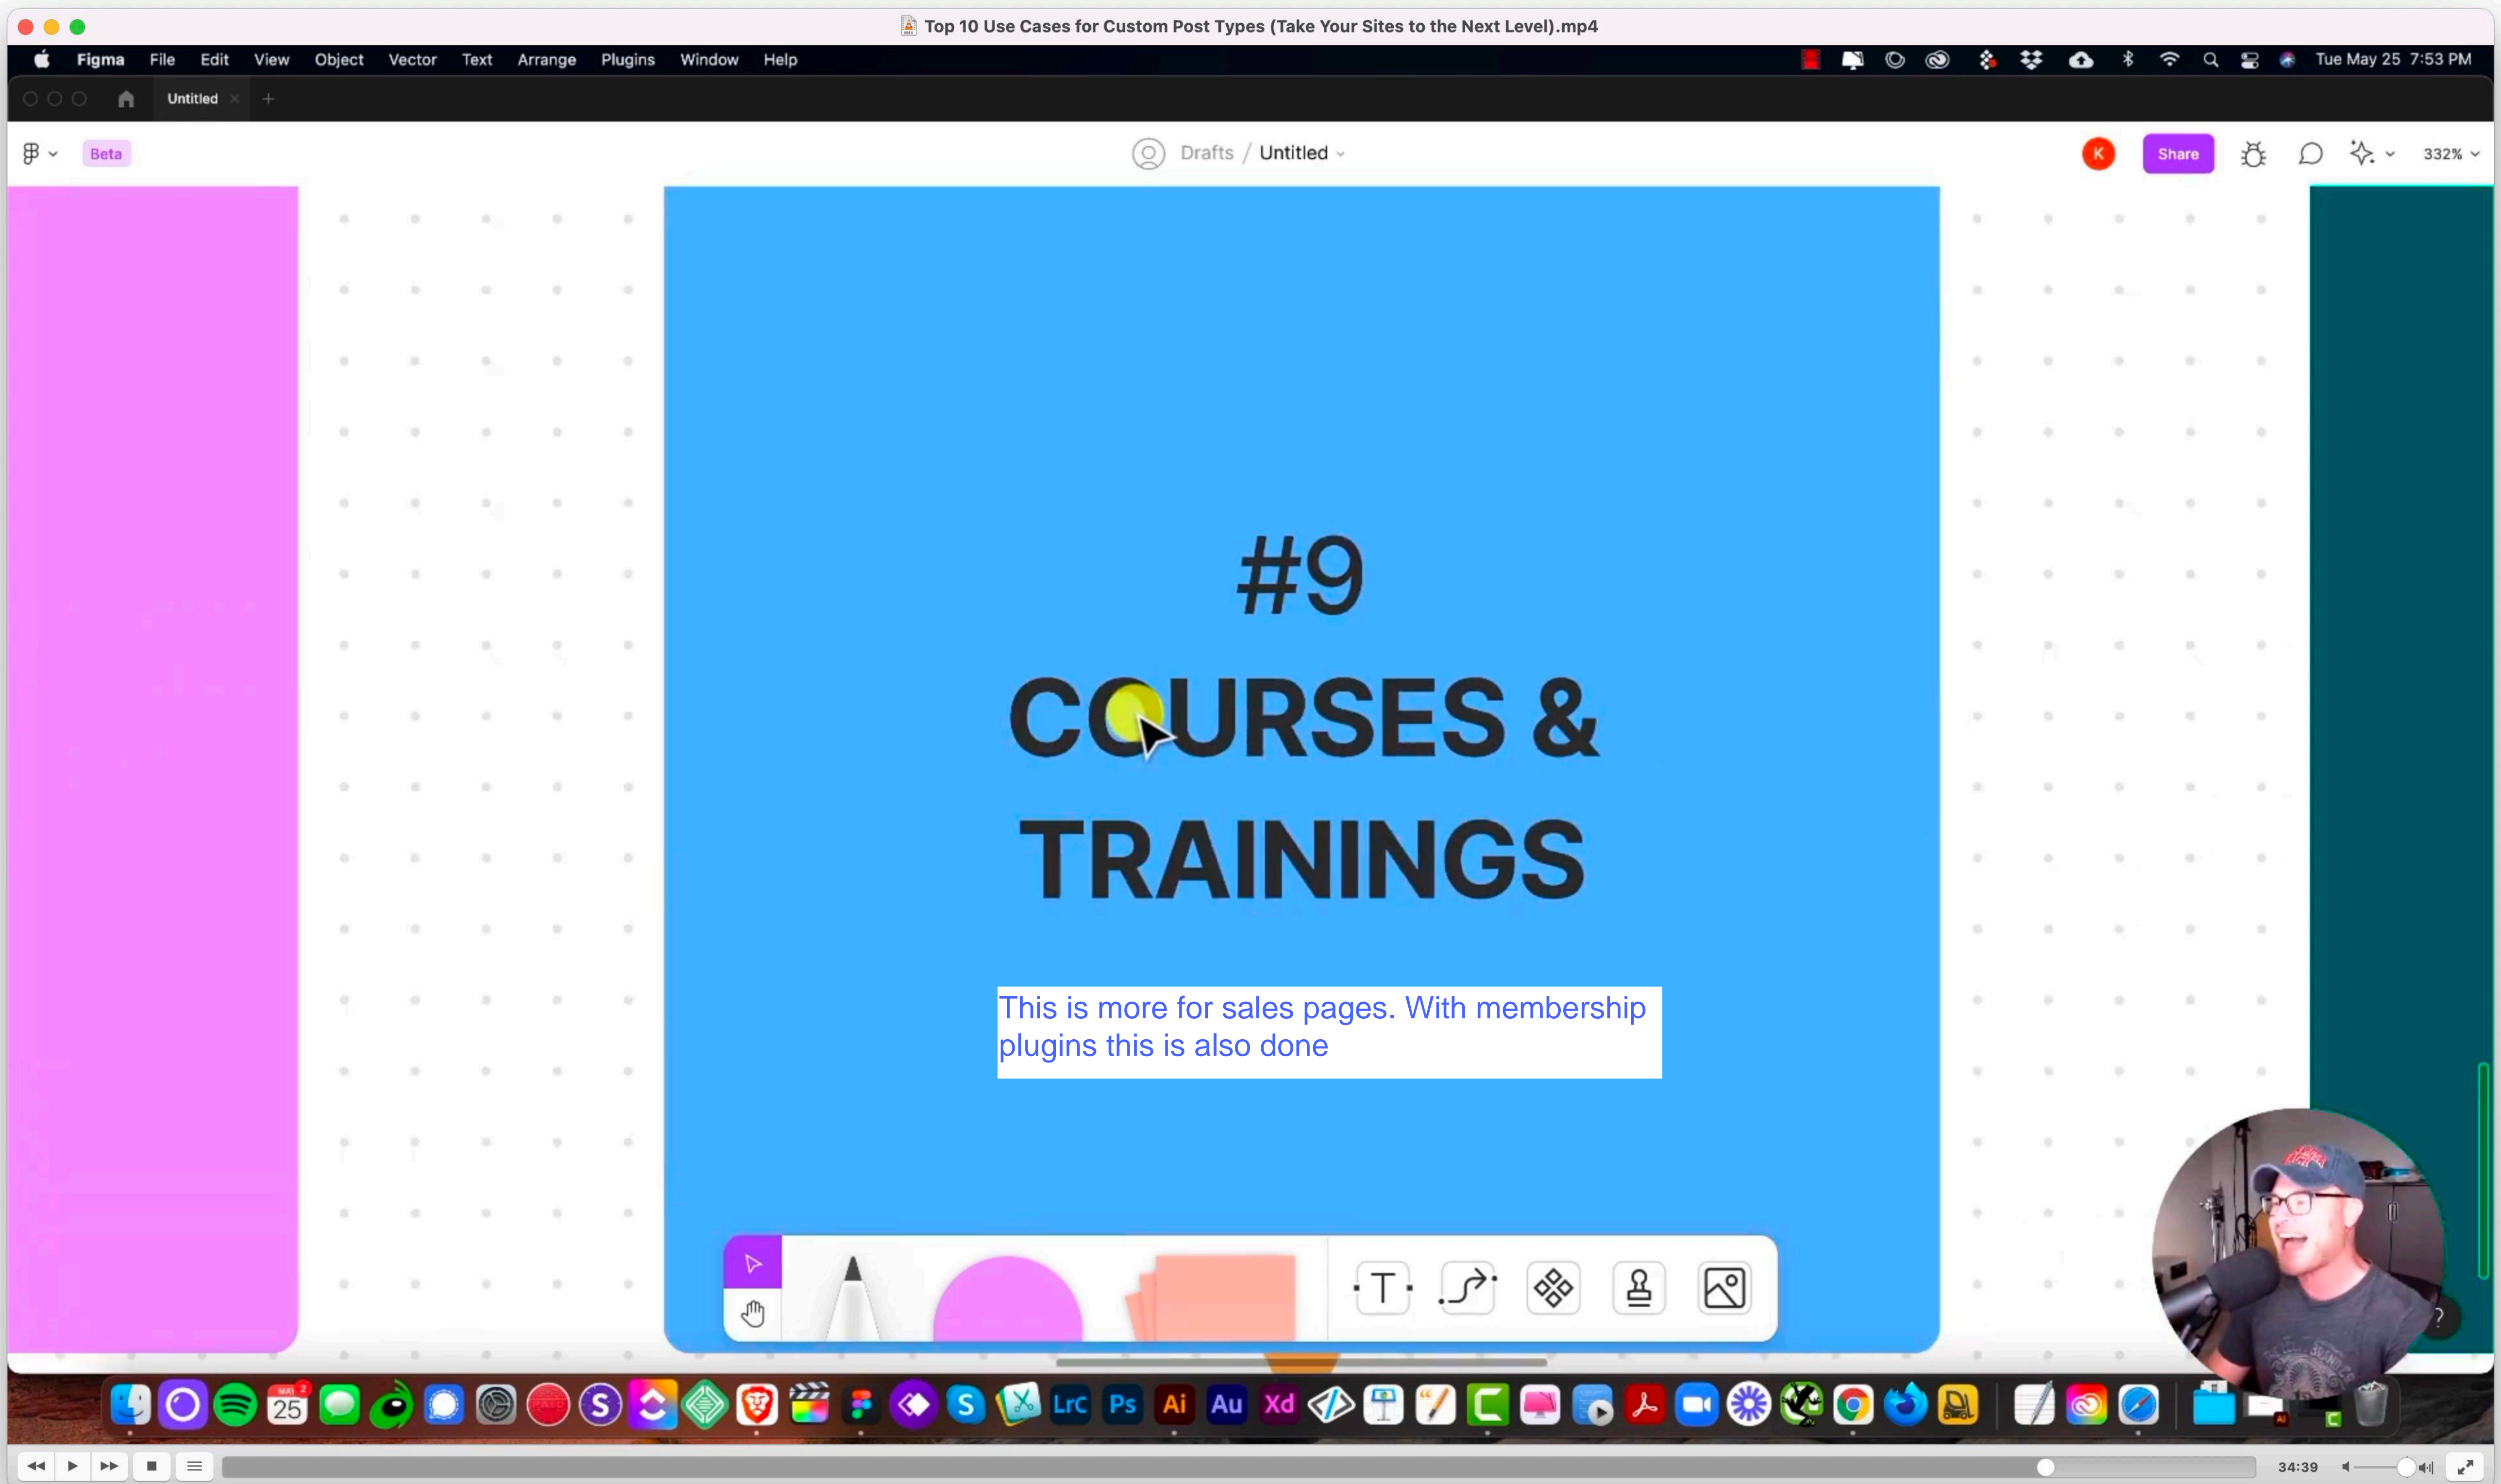

#6 SERVICE AREAS

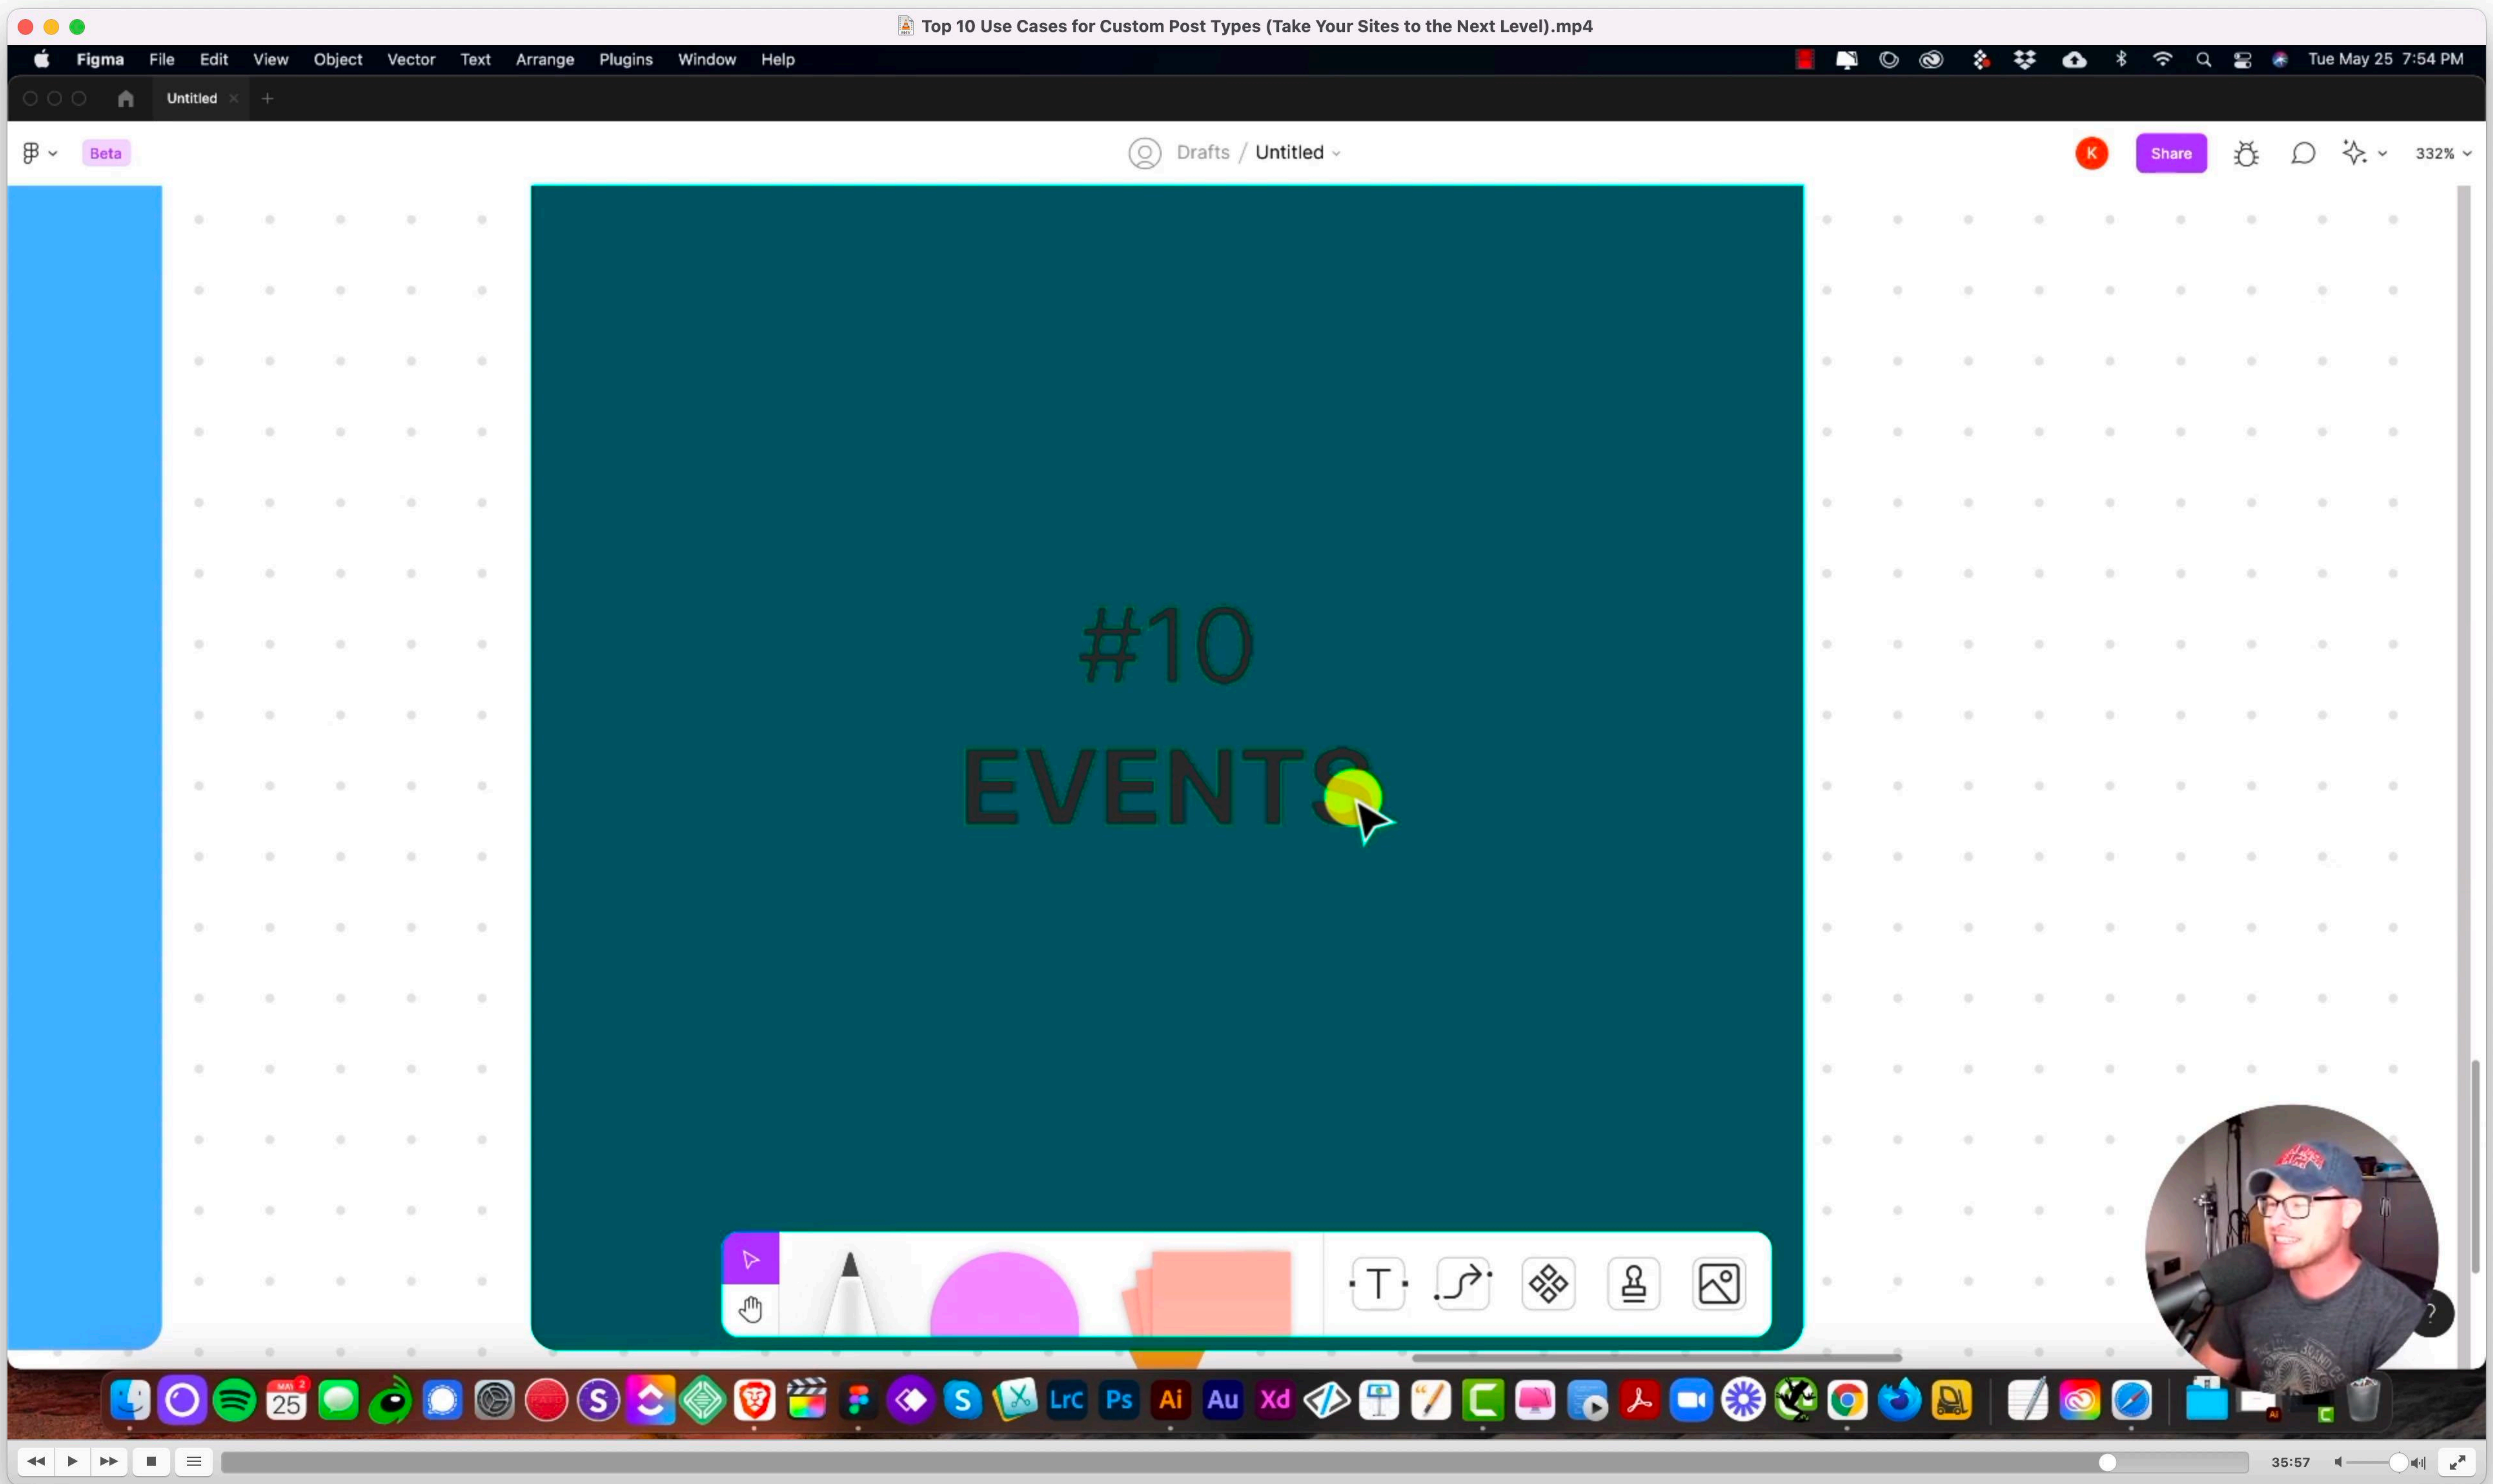

Refers to a region where services are provided, but not necessarily an office is there

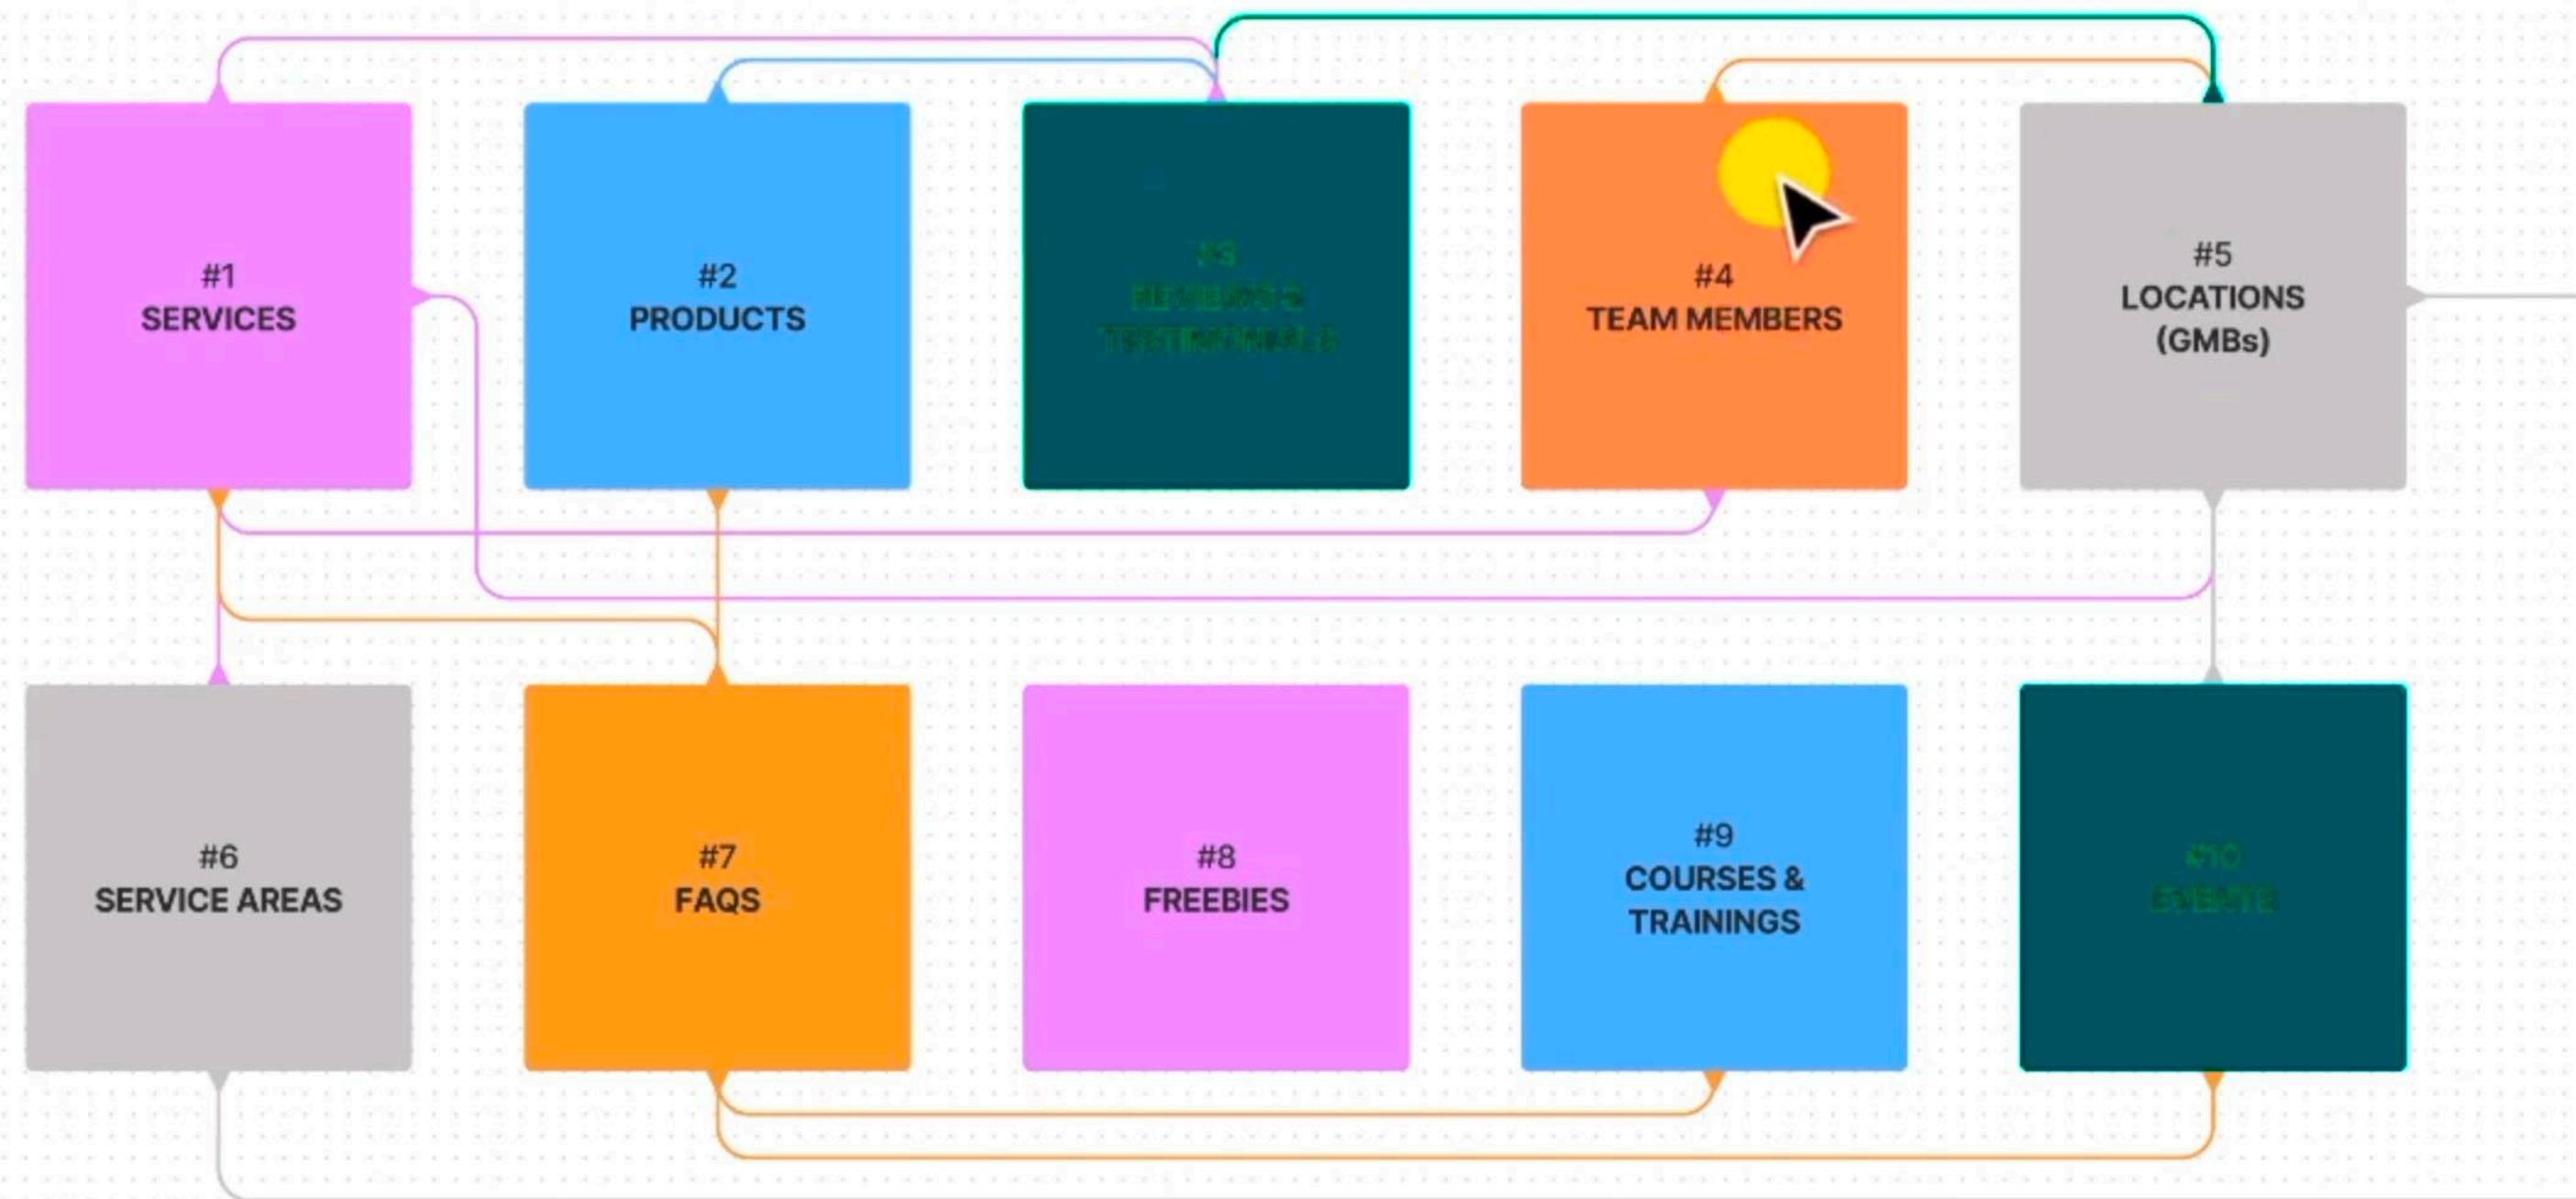

Top 10 Uses for Custom Post Types

(For Business Websites)

But Why?

- Makes data easier to query.
- Makes data categorizable (with one or multiple taxonomies).
- Makes it easier to attach custom fields.
- Keeps the dashboard cleaner & more organized.
- Makes it easier to create & query relationships (see the connections to the left).

But How?

[Click here to watch the video.](#)
