ABOUT KEVIN GEARY

Get to know Kevin

Father & Husband

I'm blessed with a fantastic wife and three beautiful girls. They're my #1 priority.

Entrepreneur

Starting and running businesses is in my blood, and it's been that way since I was a kid. I'm wired to be an entrepreneur.

BJJ Brown Belt

Jiu-Jitsu is crazy. It challenges you to the core, teaches you a lot about yourself, humbles you, and gives you unique friendships.

Photographer

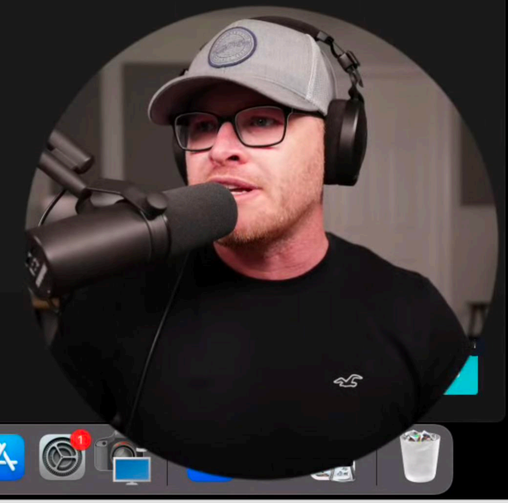

I've been doing photography for close to 20 years. These days it's mostly just my kids who have to put up with my camera.

Music Lover

I'm a lover of almost all music, but I mostly listen to conscious rap. I'm really intrigued by high-level, meaningful lyricism.

Ambivert

I can be outgoing when I need to be, but my natural tendency is to be quiet and reserved. And I think very deeply on a lot of things.

MORE ABOUT THIS VIDEO

It's time to get therapy for your attachment issues!

If you want to step up your web design game, you've gotta be a master of positioning elements. That means knowing the difference between static, relative, fixed, absolute, and sticky positions.

In this video, I explain each position and how it works. I also give a quick tip on getting sticky elements to behave on mobile devices.

While this video doesn't cover every detail of every position, it's a great starting point that should give you enough info to use these positions in your work. As you do that, you'll get better at them over time.

You'll see this arrangement all the time in our industry because it *feels* fair.

Notice I said, "feels." I didn't say it *is* fair.

Why clients love milestone payments

Clients love milestone payments because they get to keep their money in their pocket until a portion of the project is delivered (except for the first payment).

It feels safer for them because there's less risk if you disappear – or just plain suck.

And in fairness to the client, this happens a lot. Web design agencies do disappear. And a lot of them suck. I'm certainly not disagreeing with those points.

The question is, "Does a milestone payment arrangement fix this problem?"

No, it doesn't. The people who are going to disappear are still going to disappear, and the people who suck are still going to suck.

What does fix the problem? I'll tell you later.

There's another reason clients love the milestone payment arrangement beyond security, but I'll tell you that later, too. I don't want to spoil the punchline!

What about agencies? Why do they seem to love milestone payments so much?

Relative, Absolute, Fixed, & Sticky Positioning in Bricks Builder – Fix Your Attachment Issues!

It's time to get therapy for your attachment issues!

If you want to step up your web design game, you've gotta be a master of positioning elements. That means knowing the difference between static, relative, fixed, absolute, and sticky positions.

In this video, I explain each position and how it works. I also give a quick tip on getting sticky elements to behave on mobile devices.

While this video doesn't cover every detail of every position, it's a great starting point that should give you enough info to use these positions in your work. As you do that, you'll get better at them over time.

Relative, Absolute, Fixed, & Sticky Positioning in Bricks Builder – Fix Your Attachment Issues!

It's time to get therapy for your attachment issues!

If you want to step up your web design game, you've gotta be a master of positioning elements. That means knowing the difference between static, relative, fixed, absolute, and sticky positions.

In this video, I explain each position and how it works. I also give a quick tip on getting sticky elements to behave on mobile devices.

While this video doesn't cover every detail of every position, it's a great starting point that should give you enough info to use these positions in your work. As you do that, you'll get better at them over time.

MORE ABOUT THIS VIDEO

Overlay headers are very modern and visually appealing. Unfortunately, they make websites more difficult to manage because they require special design considerations and potentially limit what you can do with hero sections.

BUT ... what if we could selectively apply an overlay header style to a given page while retaining a standard header on all other pages by default?

That would be very powerful!

The list view of the post

Clients love milestone payments because they get to keep their money in their pocket until a portion of the project is delivered (except for the first payment).

them because there's less risk if you disappear – or just plain suck.

And in fairness to the client, this happens a lot. Web design agencies do disappear. And a lot of them suck. I'm certainly not disagreeing with those points.

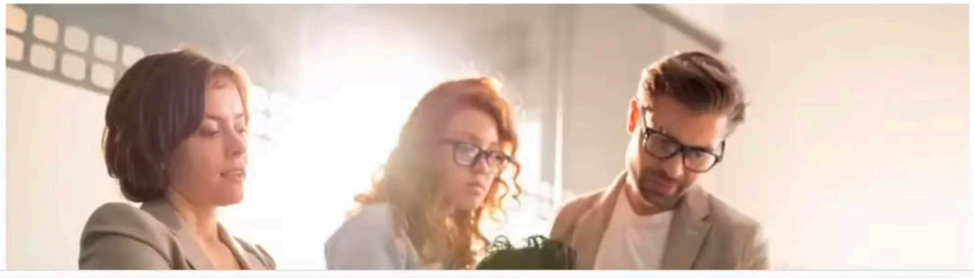

The question is, "Does a milestone payment arrangement fix this problem?"

No, it doesn't. The people who are going to disappear are still going to disappear, and the people who suck are still going to suck.

What does fix the problem? I'll tell you later.

There's another reason clients love the milestone payment arrangement beyond security, but I'll tell you that later, too. I don't want to spoil the punchline!

What about agencies? Why do they seem to love milestone payments so much?

This is a list post and the list headings should be numbered…

HappyFiles Pro

Happy Files Pro Panel

Another big problem with native WordPress is the lack of organizational tools in the media gallery and elsewhere.

Even small sites end up with dozens and dozens of photos randomly thrown into a junk drawer called the media gallery.

Well, HappyFiles Pro came to the rescue.

It's a straightforward plugin. You activate it and choose which areas of WordPress you want to be able to organize. It works in the media gallery, posts, pages, custom post types, templates, and more.

HappyFiles Pro adds a dynamic drag-and-drop folder system so you can quickly get your content under control.

I know what you're thinking. "Folders? Ewww."

They're not typical folders, though. There's a setting in HappyFiles Pro to switch the folder functionality so that they behave more like tags. You can turn that on if you want an item to live in more than one folder.

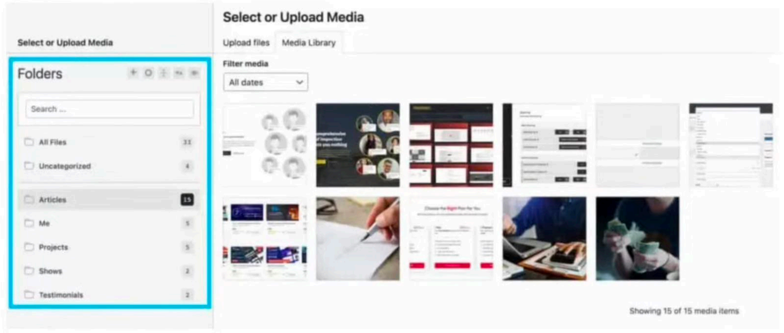

Drag, drop, done.

Right now, it's only for Bricks Builder, but it's coming soon to Gutenberg, and there will be a Figma add-on for anyone who wants to continue doing UI design in Figma.

The value is absurd. I think it would be an excellent idea to snag a copy of Frames before it takes WordPress by storm. The price is only going to go higher and higher.

Another big problem with native WordPress is the lack of organizational tools in the media gallery and elsewhere.

Even small sites end up with dozens and dozens of photos randomly thrown into a junk drawer called the media gallery.

Well, HappyFiles Pro came to the rescue.

It's a straightforward plugin. You activate it and choose which areas of WordPress you want to be able to organize. It works in the media gallery, posts, pages, custom post types, templates, and more.

HappyFiles Pro adds a dynamic drag-and-drop folder system so you can quickly get your content under control.

Right now, it's only for Bricks Builder, but it's coming soon to Gutenberg, and there will be a Figma add-on for anyone who wants to continue doing UI design in Figma.

The value is absurd. I think it would be an excellent idea to snag a copy of Frames before it takes WordPress by storm. The price is only going to go higher and higher.

of choices (most anything you could want). When using Meta Box or ACF, your custom fields will also become column options, complete with inline editing.

The amount of time, energy, and clicks this plugin saves is incalculable. Even though it's optional, Admin Columns Pro is worth the investment.

It wins in every single important aspect of the grading system.

If you're only building simple contact forms, then most form systems will do. But, as soon as you're tasked with creating a more complex form, you'll quickly see the limitations of most form builders.

WS Form handles advanced use cases with ease. I've yet to run into a use case that I couldn't accomplish with WS Form (where many other forms plugins failed).

Not counted because it's outside of the group!

Wrap-Up

I hope this helps you with your Bricks Builder plugin stack. If anything changes, I'll make sure to update it here. Also, if you're using any plugins that should be in my Bricks Builder stack, drop a comment and give me a heads-up!

All. Day. Yes.

WPCodeBox is a code snippet plugin that allows you to add many types of code to your WordPress website. It also has a unique cloud library feature that allows you to easily share your snippets across all your sites.

I mostly use it for writing SCSS in WordPress, though. It has a great SCSS compiler with a live preview, so I can see my styling output without having to refresh the site repeatedly.

#12: WS Form Pro

WS Form Pro Create Form

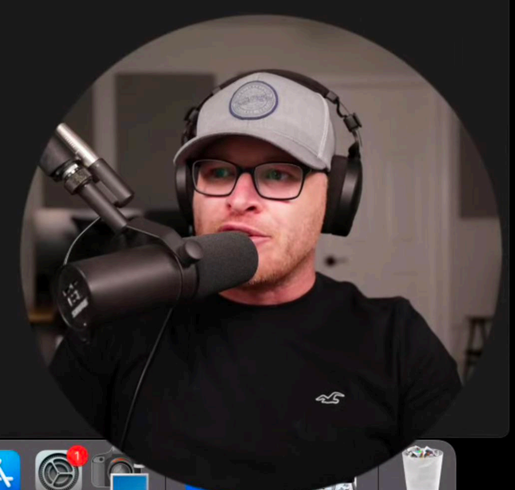

WS Form Pro is the best forms plugin for WordPress by far. Anyone who says differently is probably just a fanboy for their preferred forms plugin and has yet to use WS Form. I've used them all, so I can confidently say which is best.

Why is it the best?
